Septemeber 14, 2007

NEW - Assembled Pilot Devices Catalog for the Modular Range

ABB is excited to announce the release of a new Assembled Pilot Devices catalog, the first of its kind for the ABB Modular range pilot devices line. The new catalog provides four major benefits:

- (1) it simplifies building part numbers
- (2) eliminates confusion regarding the selection of compatible accessories
- (3) ensures accurate list prices
- (4) makes comparing two or more assembled products easy

The Assembled Pilot Devices catalog features an all-new selection grid system for configuring assembled part numbers. No part numbers have changed, but the method for obtaining the part numbers from the catalog is new. Each page features a selection grid from which customers can simultaneously choose options, build part numbers, and calculate list prices for thousands of combinations of Assembled Modular Devices.

Includes NEW part number selector table :

This new part number selection system is perfect for your customers who order or stock large quantities of assembled Modular products, or for those looking for less-common Modular device combinations. Ordering assembled devices will help reduce stocking space and lower inventory cost.

Product Selector and Pilot Device Configurator support :

This 48-page catalog will also be included as a new section in the 2008 ABB *Product Selector*.

The Assembled Pilot Devices catalog was designed to support the electronic ABB Pushbutton Configurator. The [Pushbutton Configurator](#) can be downloaded at:
