ABB Mining technology roadshow

Power and productivity
for a better world™

Agenda

ABB Mining technology roadshow October-November 2013

Safety

This session will address some of the major safety concerns on mine sites today, and in particular, arcing faults. Arc faults can produce enormous gas pressures and extreme temperatures which makes containment a key issue in mining safety.

In this presentation we will show you how arc faults occur, how arc faults behave and solutions to mitigate the arc flash risks.

Changing environment

The impacts of a changing business environment and the challenges of maintaining existing equipment

Some interesting new developments in remote monitoring and radiography of existing equipment to help reduce future cost, maintenance and downtime with potential to significantly extend your product lifecycle.

Future of mining

Solving the technical issues in mining with Smart Integrated Solutions that simplify the various mining processes and improve Efficiency across Continuous Operations.

Optimised solutions

Learn about how you can minimise costs and get complete transparency and of what is happening on site whilst maintaining control of your systems. In addition find out more about how ABB have the unique supplier capacity to provide scalable solutions to fit every customer's needs.
