

Press Release

Medium voltage products for OEM customers

At the Hanover Fair, OEM customers can learn all they need to know about ABB's range of medium-voltage products and components.

Hanover, 23 April 2012 – ABB offers its OEM customers a comprehensive portfolio of innovative, up-to-the-future medium-voltage products and components. These enable OEMs to focus their products with responsive flexibility on the requirements of future distribution networks. From station gateways over protection relays, circuit breakers, load break switches and fuses up to embedded poles and vacuum interrupters we deliver everything you need for your switchgear.

The innovative ultra fast earthing switch (UFES) greatly increases system and process availability as well as operator safety for switchgear systems.

In addition, eco-friendly products and efficient manufacturing processes help to reduce environmental impact. To give an example: the PT embedded poles reduce the carbon dioxide emissions involved by more than 50 per cent compared to analogous pole components based on epoxy resin, enabling 3,000 tons of CO₂ to be saved each year.
