Invitation

Water Expo

24-26 June 2008

ABB technologies for the complete water life cycle

Can we imagine a world without water?

Water is an essential resource for the ecosystem and it is also the key factor supporting all main development activities from agriculture and industry to energy. To be in step with future requirements, it is essential to find more effective methods to preserve and use water. Transport water in the most efficient way, reduce energy consumption, reduce losses, improve treatment quality and efficacy before and after use are the key factors of this challenge.

*We look forward to seeing you at
ABB booth (C14) and ABB Poster Presentation
at Singapore International Water Week,
Suntec Singapore International Convention
& Exhibition Centre,
24-26 June 2008*

Register online at www.siww.com.sg

For nearly 50 years, ABB has been equipping thousands of water plants and networks, providing products, systems and services in over 100 countries worldwide. ABB provides the expertise and the solutions for all the activities related to water lifecycle, from water intake to re-introduction into the environment.

ABB products and solutions are designed to improve performances of water plants and networks. ABB's efficiency motors and variable speed drives can improve energy efficiency by 60%. ABB Water Leakage Management solutions help utilities to monitor and reduce losses of distribution networks. Irrigation solutions help to monitor and optimize the consumption of the water in agricultural applications.
